## Summary

I am a robotics researcher focused on **Physical AI**, integrating learning-enabled robot capabilities into real-world **inspection, automation, and assistive** frameworks. I am currently a Postdoctoral Researcher at the University of São Paulo (USP), working on the development of robotic frameworks for inspection and automation, with an emphasis on **manipulation and locomanipulation**. I received my PhD at the University of Auckland, where I developed **human-robot interfaces and shared-control** methods to combine **biosignals** (e.g., EMG) and **wearable devices** with external sensing (e.g., **motion capture and vision**) to decode discrete and continuous human motion for intuitive **control of robotic and prosthetic** devices. During my MSc at USP, I worked on **EEG-based epileptic seizure prediction**. My primary interest lies in robotics, sensing, and learning, with the goal of developing systems that are **robust for real-time control in real-world settings** across **industrial, medical, and daily-life applications**.
